**ACCESS: An Agent Based System for Distributed Information Management**

Martijn Warnier, Reinier Timmer, Frances Brazier, Anja Oskamp

**Distributed Digital Criminal Dossiers**
- Dossiers are created by Public Prosecution
- Dossiers consist of Records and Meta-Data
- Meta-Data is stored by the Public Prosecution
- All data is stored by the Responsible authorities (GBA, RvdKB, etc.)
- Shared Ontology is assumed
- Dossiers guarantee ‘up-to-date’ information
- If a case goes to Court the Dossier needs to be frozen (no longer kept ‘up-to-date’)
- The Public Dossier decides what information should be contained in a Dossier

**AgentScape Agent Platform**
- Uniform Middleware
- Built-in security (sandboxing, authentication, ssl)
- Support for large distributed agent systems
- Facilitates communication between locations
- Integrity of Agents
- Confidentiality of Agent data (& code)
